

LifeTech® Superfines Admixture

CAS No. 554-13-2

QS-PDS-801 Revision: 04

Date of Last Revision: September 15, 2022

Formula: Li_2CO_3

Appearance: An odorless, white powder. Lithium carbonate based admixture.

Application: LifeTech superfines is the medium of the LifeTech grades of lithium carbonate available from Livent. Because of its fine particle size and narrow particle size distribution, this product has been chosen as the grade of choice where reactivity and performance are based on the surface area of the lithium carbonate particles providing controllable, uniform and predictable rates of reaction. Since it is the medium of the grades, it is not as reactive as the ultrafines, but more reactive than the fines. If a different reaction rate is desired, the other LifeTech grades should be evaluated in use.

Cementitious Systems

LifeTech superfines is a chemical admixture that can be used to adjust and accelerate the setting time of cementitious systems such as high-alumina cements (HAC) and alumina-portland cement blends. Common applications for HAC and HAC/PC blends include:

- Refractory cements
- Self-leveling floor systems
- Quickset mortars
- Shotcrete / gunite
- Quickset adhesives
- Rapid-repair materials

The dosage of LifeTech superfines depends on the type of cementitious system in use, as well as the cement factor of the mix design.

LifeTech superfines provides an accelerating effect by increasing the rate of cement hydration at an early age. In the presence of LifeTech superfines, compressive strength begins to develop immediately. The desired setting time can be adjusted by changing the

dosage rate (See figure 1). For example, in a HAC system, the setting time can be adjusted to a few minutes. In general, LifeTech superfines is more reactive than technical grades of lithium carbonate.

In general dosages of 0.02-0.05 % are sufficient for pure HAC systems, and addition rates of LifeTech superfines should be increased as percentage of HAC in HAC/PC mixes is decreased. For example, in mixes containing 10% HAC, set times similar to those obtained at 0.02% addition of LifeTech superfines in pure HAC systems may need addition rates of 0.5-1.0 %. All addition rates are based on total cementitious amount. Our technical experts can provide assistance on dosage based on intended use. LifeTech superfines provides a uniform set throughout the mix not achievable with grades that provide a wider particle size distribution.

LifeTech superfines is a chemical admixture containing essentially no sodium or potassium alkalis, which are known to promote alkali-silica reaction (ASR) in cementitious systems containing reactive silica minerals. LifeTech admixture is based on lithium, which is known to suppress the ASR reaction in concrete.

Effect of LifeTech superfines dosage rate on set times of HAC

Other

The unique properties of LifeTech superfines have made this product the grade of lithium carbonate of choice in a number of other applications such as in manufacture of ceramics, welding rods, refractory materials, and specialty glasses. Dosage rates vary widely depending on the application. Because this product is more reactive due to its reduced particle size in these applications, in general, lower quantities of LifeTech superfines are needed than coarser grades of lithium carbonate. Testing should be conducted in the application to optimize dosage when substituting LifeTech superfines for another grade of lithium carbonate.

Product Specifications:	Li ₂ CO ₃ , wt. %	99.3	min
	Loss @ 500° C	0.6	max
	Na ₂ O, wt. %	0.2	max
	CaO ppm	0.05	max
	SO ₄ , wt. %	0.1	max
	Fe ₂ O ₃ , wt. %	0.003	max
	Cl, wt. %	0.01	max
	Insolubles (in HCL), wt. %	0.02	max
	D50	7 µm min	18 µm max
	Malvern Span		
	D90	50 µm	max
	Malvern Median	12 µm min	30 µm max
	H ₂ O*, wt. %	0.6	max

* Loss at 500°C

Other Data:	Loose Bulk Density	0.4 g/cm ³ (25 lb/ft ³)
	Tapped Bulk Density	0.7 g/cm ³ (44 lb/ft ³)

Murgesh (SDS) - Physical Properties:	Molecular Weight	73.89
	Melting Point	720°C
	Specific Heat @ 25°C	0.315 cal/g°C
	Standard Heat of Formation	-290.64 kcal/mole
	Standard Heat of Fusion	10.7 kcal/mole

Water Solubility: Lithium carbonate solubility varies between 8-12 gm/L depending on temperature of the water. Water solubility is 1.3 wt. % @ 20°C

Toxicity/Safety Data Handling / Storage / Disposal: *Information on toxicity, safety, handling, storage and disposal is contained in the Safety Data Sheet (SDS) for this product.*

Shipping Containers: LifeTech superfines is packaged and shipped in polyethylene lined fiber drums containing 220 lbs (100 Kg) or in 55 lb (25 Kg) bags packaged 40 to a pallet for a total of 2,200 lbs (1,000 Kg) per pallet. Packaging in supersacks is available upon special request.

Shipping Limitations: Shipments of LifeTech superfines require no dangerous goods shipping labels.

Post, Parcel, Air, Water, Rail, Truck
Acceptable within each carrier's weight limits and packaging requirements.

LifeTech Superfines is not manufactured nor intended for drug use.
